Education

CUNY – Hunter College New York, NY

Bachelor of Arts in Computer Science, Minor in Mathematics *May 2027*

Coursework: Data Structures & Algorithms, Object-Oriented Programming I & II, Software Analysis & Design III

Experience

Software Engineer Intern Oct. 2025 – Present

FlowState LLC *New York, NY*

- Built a backend Node service with **11** Express endpoints for AI question generation, answer grading, and job matching, helping users prepare for interviews.
- Streamlined backend error handling by consolidating validation, upstream, and parsing failures into a single shared error handler, improving consistency across Express endpoints.
- Launched paid checkout with **Stripe**, enabling secure transaction processing through authenticated sessions and **webhook** fulfillment, allowing users to complete payments seamlessly.
- Improved API reliability across **5** REST endpoints, measured by p95 latency and failure rates, by load testing with k6 and Postman.

Software Quality Engineer Intern Sep. 2025 – Aug. 2026

NBCUniversal *Stamford, CT*

- Led pre- and post-release smoke and regression testing for Android and Roku platforms using QMetry, certifying 3 apps across **4** release trains and identifying **8+** defects before production.
- Audited **6+ CMS**-driven pages against backend configuration using staging checks, preventing misconfigured content from reaching production.
- Debugged streaming playback failures using Charles Proxy and HTTP log analysis, preventing playback issues across **3** NBC releases.
- Consolidated **35+** legacy test cases into 17 **QMetry** test plans, cutting **regression** maintenance by **50%**.

Projects

PropertyAnalyzer | *TypeScript, Node.js, Express.js, Docker, GCP (Cloud Run), OpenAI API* **GitHub**

- Built a property lookup API using a **TypeScript** service layer over RentCast, returning **15+** structured data points.
- Automated CI/CD using Cloud Build and commit-tagged **Docker** images, deploying to **GCP** Cloud Run on every push.
- Reduced invalid-input failures reaching paid RentCast and OpenAI APIs by adding request-parameter validation and layered error handling across the analysis controller and external API service.

CheckPoint | *Node.js, Express.js, NPM, Docker, Postman (Load Testing), GCP (Cloud Run)* **GitHub**

- Built a **Node.js** data validation layer with custom middleware for parsing, sanitization, data loading, and authorization, ensuring requests are validated before database access.
- Generated **MongoDB** seed data to test custom middleware across endpoint requests and query types, ensuring API validation behaved as expected through Postman.
- Verified API stability under real-world traffic, processing **300+** requests without a single failure, by load testing with **100** concurrent users in Postman.

Technical Skills

Languages: TypeScript, JavaScript, Python, C++, SQL, HTML
Frameworks & Libraries: Node.js, Express.js, React.js, Tailwind CSS, Drupal CMS
APIs & Integrations: REST APIs, GraphQL, OpenAI API, Stripe, JWT
Databases: MongoDB, MySQL
Cloud & DevOps: Google Cloud Platform (GCP), Cloud Run, Artifact Registry, IAM, Docker, Vercel, Cloudflare, Railway
Testing & QA: Jest, Playwright, Postman, Load Testing, k6, QMetry, Charles Proxy, HTTPie
Developer Tools: Git, GitHub, GitHub Actions, Jira, NPM
