Education

CUNY – Hunter College

New York, NY

Bachelor of Arts in Computer Science, Minor in Mathematics

May 2027

Coursework: Data Structures & Algorithms, Object-Oriented Programming I & II, Software Analysis & Design III.

Experience

Software Quality Engineer Intern

September 2025 – Present

NBCUniversal

Stamford, CT

- Prevented critical playback failures across **2** NBC releases by analyzing HTTP request/response logs and debugging streaming issues using **Charles Proxy** to diagnose failure points.
- Improved backend data accuracy by **15%** across live stream and Olympic content pipelines by conducting structured **CMS** data audits and validating data integrity before release.
- Caught pre-release defects on NBC and NBC Sports apps by executing structured regression testing against Firebase-distributed Android builds and Roku builds before deployment.
- Blocked critical defects before production across **3** NBCO releases by validating core application workflows against release requirements and executing **50+** Jira test cases per cycle.

Software Engineer

October 2025 – Present

FlowState LLC

New York, NY

- Architected MVC REST API spanning **8+** Express endpoints by structuring dedicated controllers for AI question generation, answer grading, and job-mapping workflows.
- Enabled real-time speech transcription by generating short-lived AssemblyAI streaming tokens through a dedicated Express endpoint with automatic auth-header fallback.
- Orchestrated two containerized services in production by deploying the Node backend and Python FastAPI service through a single Docker Compose configuration for reproducible builds.

Software Engineer Intern

February 2025 – June 2025

The Difference App LLC

New York, NY

- Developed full-stack health tracking app supporting daily habit logging by building Node.js REST endpoints backed by a normalized relational MySQL schema.
- Reduced backend codebase by **40%** by refactoring duplicated Express route logic into reusable modular functions, eliminating **80+** redundant lines of code.
- Improved administrative data access by implementing structured CRUD endpoints for client-driven create, read, update, and delete operations on MySQL records.

Projects

Broker | *React, Node.js, Express.js, JavaScript, MarketStack API, OpenAI API, Postman*

GitHub

- Shipped a full-stack stock analysis platform, enabling AI-driven insights by pre-computing volatility, price momentum and daily range metrics before **OpenAI** inference.
- Reduced redundant MarketStack API calls, measured by a 10-record EOD limit per query, by constructing parameterized URLs through a dedicated service layer.

PropertyAnalyzer | *Typescript, Node.js, Express.js, Docker, GCP (Cloud Run), OpenAI API, RentCast API* **GitHub**

- Developed a address-based property lookup API, returning **15+** structured data points, by normalizing RentCast API responses through a typed TypeScript service layer.
- Automated the CI/CD pipeline with Cloud Build to build, push, and deploy commit-tagged Docker images to **GCP** Cloud Run on every push, enabling scalable serverless deployments.

Technical Skills

Languages: TypeScript, JavaScript, C++, Python, SQL, HTML

Frameworks & Libraries: Vanta.js, React.js, Node.js, Express.js, Jest, Playwright, Drupal CMS, Tailwind CSS

Developer Tools: Git, GitHub, Docker, NPM, Postman, HTTPie, Jira, Railway, Vercel

Backend & API Technologies: REST APIs, GraphQL, OpenAI API, Express Routing, JWT, CRUD Operations

Databases/Cloud: MongoDB, MySQL, GCP(Cloud Run, Artifact Registry, IAM)
